## **bluesign® SYSTEM**

Our bluesign®  
Certified Products

## bluesign® SYSTEM

One of our corporate objectives is to promote sustainability in the textile industry. The bluesign® system of the Swiss bluesign Technologies AG supports the same approach. We decided to become a bluesign® system partner in the beginning of 2014 based on their consistent solutions for sustainable textile production. Our common purpose is to achieve an environmentally friendly production, and to promote modern textile processes with improved ecological balance without the use of harmful substances. Our research and development department as well as our technical application engineers are steadily working on elaborating and implementing improved procedures and formulas for textile pretreatment, dyeing, printing, finishing, coating and garment finishing.

An important aspect for us is that all resources, water, energy and auxiliaries, are used in a responsible manner. As a producer of textile chemicals, we have influence on the products, our customers use and which chemicals – in the end – could pollute wastewater and air. We are aware of the responsibility we have for our environment. We are very pleased that we can participate in a strong team with other bluesign® approved textile manufacturers to offer sustainably produced textiles together.

We already registered a large number of textile auxiliaries at the Swiss bluesign Technologies AG and we regularly add more. The following list contains all products, which were approved for the bluesign® system at the time of publication of the present brochure. By means of the bluesign® bluefinder textile manufacturers can find all our current bluesign® auxiliaries on the internet.
